## PROFESSIONAL SUMMARY

A dedicated full-stack developer with over 3 years of experience building scalable frontend and backend systems using **Java** and **JavaScript** across healthcare and enterprise environments. Strong foundation in **Data Structures**, **Algorithms**, and **System Design**, with hands-on experience deploying distributed applications on **AWS** and managing database-driven services with SQL and MongoDB.

## WORK EXPERIENCE

### Software Development Intern, Medical Informatics Engineering, Fort Wayne, IN

May 2025 – Dec 2025

- Designed a distributed visitor registration system using **JavaScript** and **Meteor.js**, processing 10,000+ monthly records while integrating **AI-powered OCR** to reduce manual verification by 45% across multi-location deployments.
- Structured backend validation workflows and optimized **MongoDB** query execution, reducing peak concurrency latency by 30% while strengthening data consistency under simultaneous kiosk submissions.
- Refactored frontend components using React and **TailwindCSS** to improve modularity and reduce UI defect rates by 20% during iterative feature rollouts.
- Managed cloud deployment on **AWS EC2**, implementing CI/CD automation, monitoring pipelines, and structured rollback strategies that improved release stability by 50%.

### Software Engineer, Virtusa Consulting Services Private Limited, Hyderabad, India

Mar 2021 - May 2024

- Developed scalable backend services using **Java**, **Spring Boot**, and **MVC** design principles for healthcare and banking workflows, supporting **3+ business units** and improving operational efficiency by **35%**.
- Engineered and optimized **RESTful APIs** for concurrent enterprise workflows, improving response time by **40%** while reducing integration bottlenecks across dependent services.
- Tuned relational database schemas, validation workflows, and **MySQL** query performance, decreasing reporting latency by **40%** while reinforcing transactional integrity under high-load scenarios.
- Performed debugging, root-cause analysis, and release validation for production issues, reducing regression defects by **20%** across iterative development cycles.

## EDUCATION

### Master of Science, Information Systems,

Aug 2024 - May 2026

Indiana Institute of Technology, Indiana.

Coursework: System Design & Analysis, Database Management System, Project Management, Data Visualization.

### Bachelor of Engineering, Computer Engineering,

Jul 2015 - Nov 2019

Pydah College of Engineering and Technology, Visakhapatnam.

Coursework: Network Analysis, Data Structures, Computer Networking, Fundamentals of Unix and C.

## TECHNICAL SKILLS

- Programming & Core Concepts:** Java, JavaScript, python, Object-Oriented Programming, Data Structures, Algorithms, System Design.
- Frontend & Backend Technologies:** React, HTML, CSS, Meteor.js, Spring Boot, RESTful APIs, Angular
- Databases & Cloud Platforms:** SQL, MySQL, PostgreSQL, MongoDB, AWS EC2, AWS S3, AWS Lambda.
- DevOps & Engineering Practices:** Git, CI/CD Pipelines, GitHub Actions, Docker, Linux, Debugging, Monitoring.

## PERSONAL PROJECTS

### Vida Sana | HTML, CSS, Bootstrap, JavaScript, Node.js, Express.js, MySQL

[GitHub](#)

- Developed “Vida Sana”, a **vegan nutrition guidance** web application using HTML, CSS, Bootstrap, JavaScript, Node.js, **Express.js**, and MySQL to help users transition to a vegan lifestyle through personalized nutrition support and calorie tracking.

### Bankist | HTML, CSS, JavaScript

[GitHub](#)

- Built a secure, high-performance banking SPA using modular JavaScript, implementing robust client-side state management and strict session controls (e.g., auto-logout, authentication) to ensure data integrity across complex financial workflows.

### First Cry | Java, SQL, RESTful APIs

- Architected a scalable e-commerce backend utilizing Java and RESTful APIs, integrating a decoupled service-layer design and strategic caching mechanisms to reduce database load and enforce strict transactional consistency across concurrent sessions.
